LEHIGH VALLEY SCIENCE & ENGINEERING RESEARCH FAIR

LEHIGH UNIVERSITY

MARCH 11-12, 2016

The Lehigh Valley Engineering and Science Fair targets students in grades 6 through 12. Students are provided with hands-on activities by creating and executing science projects. Participation in the science fair at Lehigh University will assist them into developing into future leaders in any of the science, technology, engineering and mathematics (STEM) fields. Each student will have the opportunity to meet and talk one-on-one with judges who are scientists or engineers. Each student must present the project to the judges, gaining invaluable experience in the verbal presentation skills and becoming more comfortable talking to an audience. This type of interaction allows the judges to make suggestions for improvement and to illuminate the student further in their area of interest.

**Please read through the attached information and give serious consideration in becoming a participant in the research fair. This is an opportunity that gives the student an experience that is not offered in other types of events.

As the Middle School science teacher, I encourage all of you to think about becoming a part of this educational event. Please fill out the forms that are attached and return them on Wednesday, November 18, 2015, along with the science fair research plan. I am looking forward to St. Theresa School Middle School being represented at the 2016 Lehigh Valley Science & Engineering Research Fair!!

Miss Sisko
